

Bill Doolin is Professor of Technology and Organisation at Auckland University of Technology, New Zealand. Bill has taught and researched at several universities in Australasia and the UK. His research focuses on the implications of technology in organisations and society. To understand this, Bill utilises approaches based around discourse analysis and the sociology of technology. Past research has included the role of management and information technologies in public sector health reform, discourse and identity in organisational change, and power and resistance in the implementation and use of information systems. Recently, Bill has been involved in a large government funded

research programme on biotechnology, looking at public understanding of genetic technology and exploring scientists' narratives on biotechnology, work and self. His work has appeared in journals such as *Accounting, Management & Information Technologies, Discourse Studies, Information Systems Journal, Journal of Information Technology, Organization, and Organization Studies*.
